RE: Ensuring Equitable Distribution of COVID-19 Vaccine in Mississippi

Dear Governor Reeves:

On behalf of the NAACP Legal Defense and Educational Fund, Inc. (“LDF”), we call on you to take immediate steps to eliminate the stark racial disparities in Mississippi’s distribution of COVID-19 vaccinations. COVID-19 is a public health crisis that affects the entire population of Mississippi, but it has disproportionately impacted communities of color. Ensuring vaccine equity through prioritization of those most vulnerable to COVID-19 protects and benefits everyone.

Since the onset of the coronavirus pandemic, communities of color have borne a disproportionate burden of COVID-19 infections, hospitalizations, and deaths.¹ Black communities, in particular, have been ravaged by COVID-19, dying at nearly twice the rate of white people nationwide,² and at a disproportionately higher rate compared to white people in Mississippi.³ While Black people make up 38% of Mississippi’s population, they have accounted for 41% of COVID-19 deaths.⁴ Black and Latinx individuals often hold frontline essential and service industry jobs, which prevent them from working from home, and disproportionately experience social and healthcare inequities, all of which contribute to increased risk of COVID-19 exposure.⁵ Nevertheless, Black and Latinx individuals nationwide are receiving the COVID-19 vaccine at significantly lower rates than white individuals. As of May 6, 2021, more than 149 million people nationally have received at least one vaccine dose, however, racial and ethnic data is available for only approximately 55% of recipients.⁶ Of those, only 8.8% of doses thus far have been administered to Black people and 12.6% to Latinx people. In contrast, 63.2% of those vaccine doses have been administered to white people nationally.⁷ Black residents in Mississippi are likewise underrepresented in vaccine distribution even though they should be especially targeted due to their disproportionate higher rates of serious illness and death from COVID-19: they have received only 34% of vaccine doses despite being 38% of the population, and compared to white residents’ receipt of 58% of vaccine doses.⁸ These disparities cannot be explained by so-called vaccine hesitancy. In fact, although your administration and state health officials have insisted that vaccine hesitancy exists in the Black community, Black faith and community leaders have noted extensive issues regarding access to the COVID-19 vaccine.⁹ Black Mississippi residents, like

Black people in communities around the country, have aggressively sought the COVID-19 vaccination, where available.¹⁰ The under-vaccination of Black residents is due primarily to lack of access, not lack of willingness.¹¹

As Mississippi's leadership, it is your responsibility to ensure equitable vaccine distribution and protect your most vulnerable residents from increased risk of COVID-19 infection, hospitalization, and death. Barriers to vaccine access, such as vaccine deserts, lack of digital access, and inattention to unhoused and incarcerated communities, unduly burden communities of color and limit their ability to obtain the COVID-19 vaccine.¹² This disparate treatment directly threatens the rights of Mississippi's Black and Latinx residents in possible violation of Title VI of the Civil Rights Act of 1964 as well as the safeguards afforded under the Equal Protection Clause of the Fourteenth Amendment and Section 86 of the Mississippi Constitution. On April 2, 2021, the United States Department of Justice (the "DOJ") issued a statement making clear that "[t]he Civil Rights Division, together with other agencies throughout the Federal government, will continue to monitor civil rights issues related to COVID-19 and vigorously enforce civil rights laws."¹³ Quite simply, "[c]ivil rights protections and responsibilities still apply, even during emergencies. They cannot be waived."¹⁴ As a result, we urge you to review the following factors, among others, that contribute to vaccine inequity and immediately implement our recommendations, specified below, to remedy the racial inequities in your vaccination distribution methods.

A. Vaccine Deserts and Vaccine Tourism

Due to racial segregation, redlining, and other effects of structural racism, predominantly Black communities are often housed in areas with little to no healthcare infrastructure and few, if any, healthcare resources.¹⁵ This means Black residents are significantly more likely than white residents to live at least a mile away from the nearest quality pharmacy, clinic, hospital, or healthcare center.¹⁶ Thus, when local governments primarily rely on preexisting health care infrastructure and providers for vaccine administration, many Black individuals have few, if any, options for receiving the vaccine in their own communities—creating "vaccine deserts."¹⁷ Further, vaccine deserts are largely concentrated in low-income communities of color, which commonly lack transportation or rely on public transport.¹⁸ Thus, the populations with high vulnerability to COVID-19 infection and death are the same populations excluded from vaccine access and distribution.¹⁹

In Mississippi, Black residents in vaccine deserts must shoulder additional costs of finding transportation to vaccine centers outside of their neighborhoods—sometimes commuting up to an hour by public transportation—while juggling employment obligations, childcare responsibilities, declining health,²⁰ and other consequences of living in racially segregated neighborhoods that are deprived of healthcare resources. This trend cannot continue. We strongly urge you to implement the following recommendations to eliminate these inexcusable barriers and racial disparities in Mississippi's vaccine access and distribution methods.

- **Prioritize the establishment and expansion of vaccination sites, such as mobile healthcare centers, clinics, and other healthcare facilities, in underserved communities hardest hit by COVID-19 and those located in vaccine deserts.** Ensure vaccination sites consider the

targeted community's specific challenges, such as access to healthcare facilities, limited internet access, lack of transportation or limited mobility, limited English language proficiency, limited hours of availability due to work or childcare, and limited income, and provide solutions that circumvent these challenges.

- Review and analyze geographic data, such as ZIP Codes and census tracts, to ensure that investments in public health infrastructure prioritize healthcare and vaccination of populations that are underserved and/or most vulnerable to COVID-19 infection, including frontline essential workers.²¹ Place new vaccination sites in accessible public spaces within underserved communities, *e.g.*, near or within churches, community centers, public housing residences, public schools, and parking lots.
- **Collaborate with and rely on trusted community-based organizations, religious institutions, stakeholders, leaders, and activists within communities most impacted by COVID-19, before, during, and after implementing all efforts to combat vaccine inequity.** Because vaccine inequity overwhelmingly impacts vulnerable communities of color, all efforts to ensure equitable vaccine access should center around meaningful engagement with Black and Latinx communities, particularly elders and those residing in vaccine deserts. These engagement efforts should be conducted in partnership with, or led by, grassroots organizations, local activists, clergy, and other key community stakeholders, to achieve increased vaccine distribution and reduce vaccine hesitancy in vulnerable communities of color.²²
- **Take action to guard against vaccine tourism.** Frequently, when vaccination centers are brought to underserved communities to increase vaccine access for vulnerable residents, the targeted vulnerable residents are still unable to access the vaccines because more affluent people from outside areas, who have the resources and connections to learn of and travel to the new vaccination site, “skip” ahead of underserved residents to receive a vaccination—commonly labeled “vaccine tourism.”²³ To avoid vaccine tourism, elected officials should work with the targeted community's stakeholders and leaders to ensure members of the targeted community are prioritized for vaccine resources.²⁴ There should also be a public campaign to condemn vaccine tourism and discourage more privileged constituents and people outside your constituency from depriving vaccine access to those more vulnerable to COVID-19 infection, serious illness, or death, which creates greater burdens and harms for everyone.
- **In coordination with trusted community-based organizations, stakeholders, leaders, and activists representing Black, Latinx, and other communities of color, create easily accessible public education campaigns** that target, reach, and inform vulnerable and underserved populations, including unhoused and incarcerated populations, about vaccine eligibility, safety, efficacy, and distribution sites, and emphasize the absence of any cost associated with vaccination.
 - All public education campaigns should directly address vaccine hesitancy in communities of color, in a manner that validates and takes seriously the concerns, acknowledges the healthcare industry's history of racial discrimination and experimentation on Black communities, clarifies that the COVID-19 vaccine will not

replicate those practices, and provides accessible resources and data showing the safety of the vaccine.

- **Eliminate additional barriers to vaccine access.**
 - Increase community-based vaccination sites in vulnerable zip codes and—to prevent vaccine tourism and limited vaccine access for those targeted and vulnerable communities—encourage proof of residency within the targeted area prior to vaccination. However, because proof of residency requirements typically place additional burdens on low-income residents and communities of color,²⁵ all proof of residency requirements should be broad and include acceptance of identifying documents beyond government-issued identification, such as current mail (not limited to utility bills), statements from others residing in the community, school records, individual attestation of residency in targeted district, and more.²⁶
 - Eliminate all fees and co-pays associated with an individual’s COVID-19 vaccination, including hospital and clinic administrative fees, even if reimbursable.
 - Create free, COVID-19 sanitized,²⁷ wheelchair-accessible methods of public transportation to and from vaccination centers and underserved areas, racially segregated neighborhoods, and vaccine deserts for residents needing transportation assistance.²⁸

B. Lack of Digital Access & Difficulties with Online Platforms

State and local governments nationwide, including Mississippi, rely primarily on online platforms to disseminate crucial public health information about the safety and efficacy of the vaccine; vaccine appointment eligibility and registration; and location of vaccination sites. However, for many Americans, reliable broadband internet access is a luxury beyond reach.²⁹ This digital divide disproportionately impacts the elderly, low-income residents, and those in rural communities.³⁰ Lack of digital access is also more prevalent in communities of color with over 80% of white Americans owning a computer as compared to just 58% of Black Americans and 57% of Latinx Americans.³¹ Even residents who have technology and dependable internet access must contend with complex registration processes, multi-step verifications, and numerous platforms as they search for the few available vaccine appointments.³² This complicated registration process further limits vaccine accessibility for those who lack digital proficiency or the time or capacity to review various websites. The digital divide and complicated registration systems should not prevent your constituents from receiving the vaccine.³³ As such, we recommend you take the following steps:

- **Permit all vaccine sign-up and registration, waiting in line, and distribution processes to be completed in-person and by telephone, as well as online and via SMS messaging.**
- **Streamline the registration process by placing details about vaccine appointment availability on a single website.** Centralizing this information will increase user confidence and avoid confusion arising from users navigating multiple websites. Also ensure that vaccination telephone hotlines and in-person registration systems are consolidated so that all necessary information can be obtained from a central source. Make

all information about the vaccine and vaccination sites available in the most common languages used by your constituents.

- **Implement outreach methods from prior successful public education campaigns, such as the use of mobile sign-up units that travel to residencies and frequent high-traffic locations in under-served communities, to ensure vulnerable communities can easily receive vaccine and appointment information.** Coordinate with local community-based organizations, religious institutions, elected officials, activists, and other leaders to identify additional reliable methods of broad transmission of vaccine and appointment information with considerations of language proficiency.

C. Inattention to the Unhoused and Incarcerated Populations

COVID-19 vaccination plans must prioritize those experiencing housing instability and homelessness.³⁴ Black people, particularly those who are older or have poor health, are disproportionately represented in unhoused communities,³⁵ making them even more susceptible to severe COVID-19 infection and death. Communities of color are also facing increased housing insecurity due to the economic toll of the pandemic.³⁶ Black and Latinx households are more than twice as likely to report being behind on housing payments than white households.³⁷ In fact, Black people represent just 21% of all renters, but 35% of all defendants on eviction cases during the pandemic.³⁸ In Mississippi, 75% of those experiencing homelessness on a given night are unsheltered.³⁹ Unhoused communities often rely on congregate settings, such as homeless shelters or outdoor communities, where they are in poorly ventilated spaces and are unable to engage in the practices necessary to slow the transmission of the virus, such as social distancing, regular cleaning,⁴⁰ and frequent handwashing.

Similarly, vaccination plans must prioritize incarcerated people. COVID-19 outbreaks in carceral facilities have been rampant, with one in five state and federal prisoners testing positive for coronavirus, a rate more than four times greater than the general population.⁴¹ Like those in other congregate settings, individuals in jails, prisons, and detention centers are housed in poorly ventilated facilities and are unable to socially distance, have limited access to personal protective equipment and cleaning supplies, and lack adequate health care resources to prevent and treat COVID-19 infections.⁴² Additionally, the constant movement between carceral facilities and outside communities by both carceral staff and residents increases the likelihood of community spread of the virus from carceral facilities to outside communities.⁴³ Furthermore, it remains unclear whether vaccination of carceral staff prevents their transmission of COVID-19 to others; therefore, simultaneous vaccination of those living and working in carceral facilities is necessary to meaningfully reduce transmission rates both within carceral settings and the surrounding outside communities.⁴⁴ Of course, we applaud the Mississippi Department of Corrections' ("MDOC") recent efforts to vaccinate people in state prisons and encourage the continued prioritization of this key vulnerable population.⁴⁵ However, reports that the MDOC intends to punish inmates who refuse the vaccine are alarming and unacceptable.⁴⁶ Vaccination in the carceral setting must be based solely on the informed consent of incarcerated individuals without the threat of punishment.

Housing insecurity and incarceration should not be death sentences. Accordingly, we ask that you take the following efforts:

- **Provide targeted information to unhoused and incarcerated populations about vaccine eligibility, safety, efficacy, distribution, and lack of cost** with special consideration of the unique concerns and hesitations of these populations.
- **Prioritize the unhoused and incarcerated populations in vaccination plans** given their greater susceptibility to infection within congregate settings and greater risk of serious illness or death given their higher rates of comorbidities.⁴⁷ At a minimum, these populations should be vaccinated simultaneous to staff working with them.
- **Employ mobile vaccination clinics to reach unhoused communities and individuals**, including those residing outside of shelters and simultaneously offer free and COVID-safe forms of transportation (*e.g.*, designated buses, free taxis, shuttle service) to vaccination sites.

D. Collection and Publication of Demographic Vaccine Data

In addition to the above barriers to vaccine equity, there is a nationwide lack of public vaccine distribution data, disaggregated by key demographics, such as race, ethnicity, age, sex, disability, English proficiency, and geographic location.⁴⁸ These gaps in data hinder the public from tracking and evaluating the racial equity of vaccine distribution nationally and within specific localities. We applaud Mississippi for collecting data on race and ethnicity and making it available to the public.⁴⁹ Given the importance of ensuring fair treatment of all Mississippians, we ask that you require ongoing, rigorous collection and publication of vaccine administration data at the county, city, and state level, disaggregated by race, ethnicity, age, sex, disability, English proficiency, geographic location, and other relevant demographics.

To rectify the stark racial disparities in Mississippi's vaccine distribution and halt the spread of COVID-19, you must ensure that Mississippi centers racial equity as a key principle in vaccine distribution plans and efforts. Without this critical intervention, your most vulnerable constituents will remain largely unvaccinated and will continue to disproportionately fall ill from the virus or die, creating greater risks of community spread within your entire constituency and further burdening your overstretched healthcare infrastructure. Communities of color have already disproportionately borne the weight of this unprecedented public health crisis. You now have a critical opportunity to reverse this trend by ensuring racial equity in vaccine distribution.

During this unprecedented public health crisis, residents of Mississippi, including residents of color, are looking to you for the bold leadership and swift action that is desperately needed at this time. We thus encourage you to meet this moment by implementing the above recommendations and making clear your firm commitment to racial equity for all. Thank you for your time and consideration, and please do not hesitate to contact Katurah Topps at ktopps@naacpldf.org or Kaydene Grinnell at kgrinnell@naacpldf.org if you have any questions or concerns.

Sincerely,

Sherrilyn A. Ifill
